WG14 N2662

Title: **maybe_unused attribute for labels**
Author: **Martin Uecker, University Medical Center Göttingen**
Date: **2021-02-06**

The current standard draft does not mention labels in the description of the `maybe_unused` attribute, which seems to be an oversight as this is supported by some compilers with the non-standard `unused` attribute and appears to be a useful feature.

Suggested Wording:

(relative to the latest draft N2596)

```
6.7.11.3 The maybe_unused attribute

Constraint

1 The maybe_unused attribute shall be applied to the declaration of a
structure, a union, a typedef name, a variable, a structure or union
member, a function, an enumeration, or an enumerator, or a label. It shall
appear at most once in each attribute list and no attribute argument clause
shall be present.
```
